Erratum: Should Vitamin D Screening be a Part of Primary Care?

An error appeared in the August 2011 article, Should Vitamin D Screening be a Part of Primary Care?. \(^1\) On page 80, the formula for calculating a loading dose of vitamin D was listed as:

\[
\text{Loading Dose} = 100 \times (\text{Desired Actual ng/mL of 25-hydroxyvitamin D}) \times \text{Weight (kg)}
\]

The correct formula is as follows:

\[
\text{Loading Dose} = 100 \times (\text{Desired} - \text{Actual ng/mL of 25-hydroxyvitamin D}) \times \text{Weight (kg)}
\]

We regret the error.

Sincerely,

Justin Moore, M.D.
Nalini Reddy Kakulavaram, M.D.
